

## Anti-KDM5A/ RBP2/ JARID1A antibody, mouse monoclonal (18E8), KO Validated

71-177 100 μg

Storage: -20°C.

Immunogen: A synthetic peptide corresponding to human RBP2, amino acids 1416-1434.

Form: Purified monoclonal antibody (IgG) 1mg/ml in PBS- with 50% glycerol, filter-sterilized Isotype: Mouse IgG2a  $\kappa$ 

Reactivity: Human and mouse RBP2. Can detect endogenous levels of RBP2.

Validation: Specificity was validated with KO cells (human) for Western Blotting.

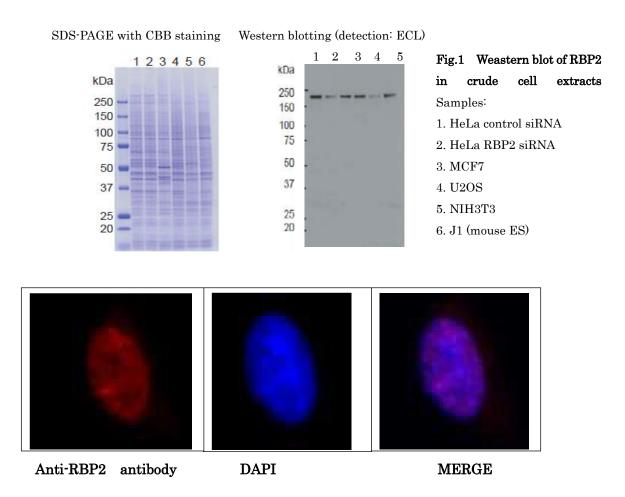

## Applications

- 1. Western blotting (~1ug/ml)
- 2. Immunofluorescence staining (~1 ug/ml)

3. Flow Cytometry (1 $\mu$ g for 10<sup>6</sup> cells.)

**Backgroud:**RBP2 was originally identified as a retinoblastoma binding protein. It is also known as JARID1A (Jumonji, AT rich interactive domain 1A). RBP2 plays both negative and positive roles in RB-mediated transcriptional activation, depending on the kinds of genes and regulates differentiation by its function as an H3K4 histone demethylase (1, 2 & 3).

## Fig.2 Immunofluorescence staining of HeLa cell with anti-RBP" antibody

- 1. HeLa cells were fixed with 4% paraformaldehyde overnight, permealized with 0.25% Triton X-100 in PBS for 10 min.
- 2. Incubate cells with 1.5% BSA in PBS for 30 min to block non-specific binding of the antibodies. Incubate the cells with 1/2,000 diluted anti-RBP2 antibody (18E8) in 1% BSA in PBS at 4°C overnight.
- 3. Incubate cells with a secondary antibody, goat anti-mouse IgG conjugated with Alex 488, at 1/1,000 dilution in 1% BSA for 1 hr at room temperature.
- 4. Nucleus (DNA) was stained with DAPI
