Anti-Sua7 / TFIIB (*S. cerevisiae*) antibody, rabbit serum, ChIP grade

62-009 100 µl

Storage temperature: Ship at 4℃ or -20℃ and store at -20℃

Immunogen: Rcombinant His-tagged full-size Sua7 protein

Form: 0.1% sodium azide added to the antiserum

Reactivity: *S. cerevisiae* Sua7 / TFIIB protein

Applications

1. Western blotting. (1/1,000~1/5,000)
2. Immunoprecipitation
3. Chromatin Immuno-Precipitation
4. ELISA

Background: The fundamental transcription factor TFIIB has the characteristics of stabilizing the DNA binding of TATA box-binding protein (TBP) and binding directly to DNA by its conformational change. Also its N terminal region binds to the RNA channel of RNA polymerase undertaking a very important role in the determination of transcription initiation point and promoter clearance. Sua7p is the TFIIB of budding yeast and is composed of 346 amino acid residues (aa)
