Anti-Importin α3 / KPNA4/Qip1 antibody, rat monoclonal (3D10)

70-325　　200 μg

Shipping and Storage: Shipped at 4℃ or -20℃ and stored at -20℃.

Immunogen: Recombinant mouse importin α3 /KPNA4/ Qip 1 (full length)

Form: Purified monoclonal antibody (IgG) 1mg/ml in PBS- with 50 % glycerol, filter-sterilized

Isotype: Rat IgG2a κ

Epitope: Not determined

Reactivity: Reactive with human, simian, mouse, rat, hamster, canine and bovine importin α3. This antibody doesn't recognize other importin α family including α4.

Applications:

1. Western blotting (250~500 fold dilution)
2. ELISA

This antibody doesn't work for immunostaining and immunoprecipitation.

Background: Importin α proteins play a pivotal role in the import of proteins from the cytoplasm to the nucleus. Importin α proteins shuttle between nucleus and cytoplasm, bind nuclear localization signal (NLS)-bearing proteins, and mediate the protein import into the nucleus with importin β. Several importin α isotypes have been identified, each exhibiting differential recognition and nuclear transport, probably via preferential binding to a particular NLS. The **importin α3 (KPNA4, Qip1)** is a member of the importin α family of proteins belonging to the Qip1 subfamily.

The antibody was purified from the serum-free cultured medium of the hybridoma under mild conditions by proprietary chromatography processes.
