

cDNA Library, Human Umbilical Vein Endothelial Cell

Product code	02-721
Size	500 ng
Storage	-20°C
Product Description	<p>This cDNA library (plasmid DNA) is constructed from Human Umbilical Vein Endothelial Cell (HUVEC)-derived poly(A)⁺ RNA by the Linker-Primer method (Ref.1) by Professor Hiroshi Nojima of Research Institute for Microbial Diseases, Osaka University. This library is unidirectionally cloned by using the oligo (dT)₁₈ linker primer which contains the restriction enzyme site of <i>Not</i> I, and <i>Bam</i>HI (<i>Bgl</i>II)-<i>Sma</i> I adaptor.</p> <p>The pAP3<i>neo</i> vector used in this library can express human genes in mammalian cells as it contains SV40 promoter. It also contains Ori of pUC plasmid required for replication in <i>E.coli</i>, f1 ori which is necessary for ssDNA synthesis, and bacteriophage T7 and T3 promoters for RNA synthesis (see Figure). GenBank Accession No. AB003468</p>
Concentration	40 ng/μl
Buffer	10 mM Tris-HCl-1mM EDTA (pH 7.5)
Quality	<p>1. Number of independent clones: 1.8 x 10⁶</p> <p>2. Average insert size : longer than 1 kb</p>
Application	<p>PCR screening of known or unknown gene: Prepare the primers for the known or unknown gene (cDNA) and amplify the gene by PCR from this library followed by cloning to an appropriate vector. It is useful for large-scale protein productions, and preparation of probes, etc.</p> <p>Standard amplifying conditions: 35 cycles of PCR reactions using 10-100 ng of cDNA as a template. (Change the quantity of template and the number of cycles depending on the expression rate of mRNA of the objective gene.)</p>
