

Anti- DYKDDDDK (same epitope as FLAG ® of Sigma) tag antibody, rabbit serum

60-031, 100 ul

Epitope tagging has become a powerful tool for detection and purification of expressed proteins. Epitope tags are short peptide sequences that are easily recognized by tag-specific antibodies. Due to their small size, epitope tags do not affect the tagged protein's biochemical properties. Most often sequences encoding the epitope tag are included with target DNA at the time of cloning to produce fusion proteins containing the epitope tag sequence.

Anti-epitope tag antibodies are useful for identification, immunoprecipitation or immunoaffinity-purification of a recombinant protein.

Anti-FLAG (DYKDDDDK)-tag polyclonal antibody was raised by immunizing a rabbit with the peptide **DYKDDDDK** conjugated to KLH.

Applications:

1. Western blotting (dilution: 1/2,000)
2. ELISA (assay dependent)

Immunoprecipitation from cell lysate expressing FLAG-PRMT6 with 2 ul of this antiserum gave only a faint band at 40 kD position after western blotting.

Other applications have not been tested.

Immunogen: DYKDDDDK cross-linked to KLH

Specificity: This antibody recognizes FLAG-tagged fusion proteins.

Form: Antiserum added with 0.05% sodium azide

Storage: Shipped at 4°C and stored at -20°C
