

Anti- SiR (Sulfite Reductase, plant) antibody, rabbit polyclonal

81-033 200 µg

Shipping and Storage: Shipped at 4°C or -20°C and store at -20°C. Do not freeze.

Immunogen: Purified recombinant maize SiR protein (full-size, no-tag attached)

Form: 4 mg/ml in PBS- with 50% glycerol. Filter sterilized. No preservative or carrier protein added.

Purity: IgG, purified with Protein A

Validation: Specificity has been validated by WB with recombinant full-size SiR protein.

Reactivity: Plant SiR protein including those of Arabidopsis, Maize and Pea.

Applications:

1. Western blotting (1/1,000-1/5,000)
2. ELISA (assay dependent)

Other applications have not been tested

Background: Sulfite reductase (SiR) is an essential protein with sulfite reductase activity required in assimilatory sulfate reduction pathway during both primary and secondary metabolism and thus involved in development and growth. It is known as a DNA-binding protein that binds to both double-stranded and single-stranded DNA without significant sequence specificity to reversibly repress the transcriptional activity of chloroplast nucleoids by promoting DNA compaction and possibly regulate DNA replication. The sequence identity between maize and Arabidopsis SiR is 77%

Fig.1 Western Blot of SiR in plant leaf extract.

Anti-SiR antibody was used at 1/1,000 dilution. Secondary antibody (goat anti-rabbit IgG antibody HRP-conjugated, ab97051) was used at 1/10,000 dilution.

1. Recombinant maize SiR protein
2. Arabidopsis leaf extract, 10 µg
3. Maize leaf extract, 10 µg

Molecular mass of SiR is 72 kDa (Arabidopsis), 70 kDa (Maize).
