

## anti-Amyloid Precursor Protein (APP N-terminus) antibody, rabbit serum (AN2)

74-106            100 µl

**Shipping and Storage:** Shipped at 4°C or -20°C, and upon arrival, aliquot and store at -20°C.

**Immunogen:** Synthetic peptide corresponding to the N-terminus (aa 18-38) of human APP

**Form:** Rabbit antiserum added with 0.05% sodium azide

**Reactivity:** Specific to human, mouse and rat APP

### Applications:

1. Western blotting (dilution: 1/3,000-1/500)
2. Immunocytochemistry (dilution: 1/1,000-1/500)

Other applications have not been tested.

**Background:** The **Alzheimer amyloid precursor protein (APP)** is an integral membrane protein expressed in many tissues and concentrated in the synapses of neurons. Its primary function is not known, though it has been implicated as a regulator of synapse formation and neural plasticity. **APP** is best known and most commonly studied as the precursor molecule whose proteolysis generates amyloid beta (A $\beta$ ), a 39- to 42-amino acid peptide whose amyloid fibrillar form is the primary component of amyloid plaques found in the brains of Alzheimer's disease patients. Isoform **APP695** lacking the protease inhibitor domain is the predominant form in neuronal tissues.

**Data Link:** Swiss-Prot, human [P05067](#) , mouse [P12023](#)

**References:** This antibody has been used in ref.3 and 4.

**Fig.1. Western blot analysis of Amyloid Precursor Protein in the crude extract of mouse embryo with anti-APP N-terminus antibody (AN2).**

The extract (10  $\mu$ g protein) was prepared from cerebral cortex of E 16.5 mouse embryo. The anti-Amyloid Precursor Protein (N-terminus) antibody (AN2) was used at 1/500 dilution. Molecular mass of mouse APP is 87 kDa. The numbers are positions of marker proteins shown in kDa.

APP undergoes various post-translational modification such as N- and O-glycosylation, proteolytic cleavage and phosphorylation.
