

DNA Size Marker, 100 bp Ladders (100-1,500 bp), Ready to use

02-420 250 µl

The BioAcademia 100 bp DNA Ladder mixture is suitable for sizing linear double-stranded DNA fragments from 100 bp to 1.5 kbp as for sizing PCR products. The 500 bp band has increased intensity (100 ng/5 µl) to provide internal orientation. The mass of DNA in each band in other bands is provided (assuming a 50 ng/ 5 µl load) for approximate quantification in comparably intense samples of similar size. To avoid annealing between the DNA bands, all the bands have blunt-ends.

DNA ladders: 100, 200, 300, 400,500, 600, 700, 800, 900, 1,000 and 1,500 bp (11 bands, see Figure below)

Concentration: 650 ng/5 µl

Recommended volume of application per lane: 5 µl

Solution: 10 mM Tris-HCl (pH 8.0), 1 mM EDTA

Storage: For short period (~1 month) at 4°C, for longer period at -20°C

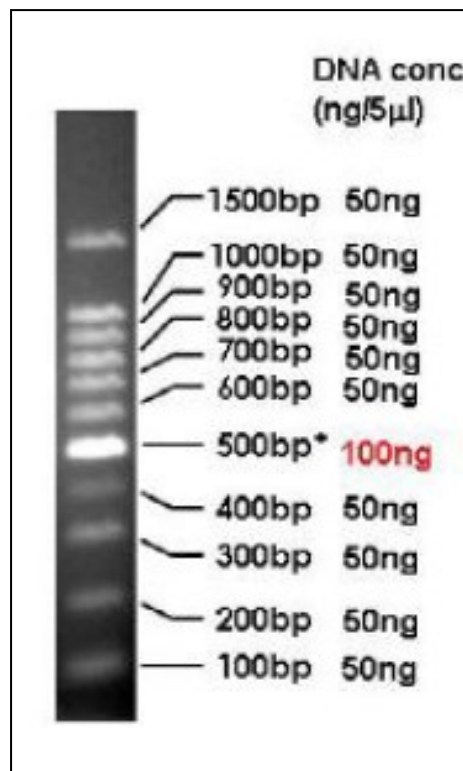

Figure. Electrophoretic pattern of 100 bp DNA ladders on 2% agarose gel in TAE buffer. Five µl of the DNA ladder solution was applied.
