

## anti- HCV NS4a protein antibody, mouse monoclonal (S4-13), FITC conjugated

65-059 50 µg

**Hepatitis C virus (HCV)** is a small (55-65 nm in size), enveloped, positive sense single-stranded RNA virus in the family *Flaviviridae* and the principal cause of parenteral non-A, non-B hepatitis. The virus genome consists of a single open reading frame of approximately 9,400 bases which encodes a single polyprotein of about 3,010 amino acids (1, 2, 3) . The polyprotein is processed by host cell and viral proteases into four structural proteins (core, envelope1 and 2, and p7) and six non-structural proteins (NS2, 3, 4a, 4b, 5a, and 5b) necessary for viral replication. NS3 serine proteinase is responsible for proteolytic processing of other non-structural proteins. **NS4a protein** (54 amino acids) forms a complex with NS3 and functions as a cofactor for NS3 protease activity.

This product is an **FITC-labeled IgG** ( $[FITC]/[IgG] = 10.4$ ) produced from the IgG fraction.

### Applications

1. Western blotting
2. Immunofluorescence staining
3. ELISA

**Immunogen:** A region of NS4 protein (the nucleotide sequence is shown in ref.4) of **HCV genotype 1b** expressed in *E.coli*. The epitope of this antibody was mapped to the N-terminal region of the NS4 protein (**NS4a**).

**Congugate:** **FITC conjugated**,  $[FITC] / [IgG] = 10.4$

**Isotype:** Mouse IgG2b kappa

**Form:** 1.4 mg/ml in PBS, 50% glycerol, filter-sterilized

**Specificity:** Specific to human HCV NS4a protein of genotype 1b. **It does not react with genotypes 1a, and 2a.**

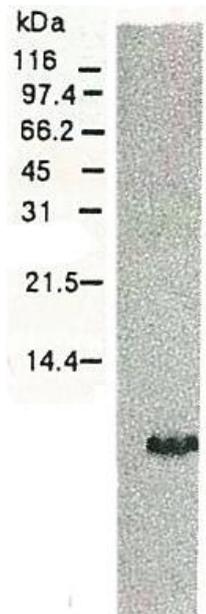

**Storage:** Shipped at 4°C and stored at -20°C

**Data Link:** Swiss-Prot [HCV protein](#)

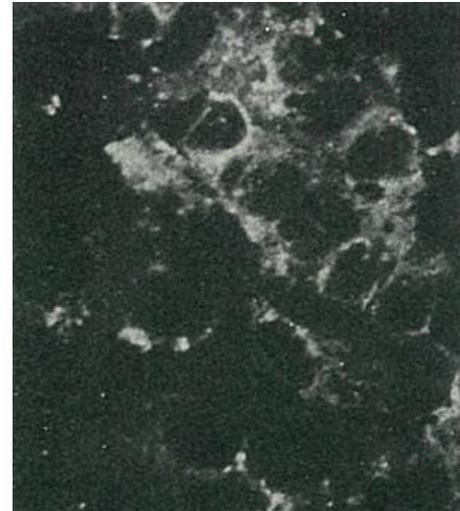

**References:** **This antibody is produced and used in ref.4.**

**Fig.1** Western blotting of HCV NS4a protein.  
Chimp liver cells were infected with recombinant vaccinia virus containing a HCV genome cDNA and were subjected to Western blotting using anti-NS4a antibody. The protein detected with this antibody is 6 kD. This small NS4 protein (NS4a) was produced from the N-terminal region of the NS4 protein.

**Fig.2** Detection of HCV NS4a protein by immunofluorescence antibody staining.  
Chimp liver cells were infected with recombinant vaccinia virus containing a HCV genome cDNA. After incubation for 48 hr, the cells were fixed with acetone and HCV NS4a protein was detected by indirect immunofluorescence staining using this antibody.
